Keep logo this far from edge

If art is not sized to bleed box there may be issues on sizing that can cause complications. Any art close to the outline is in jeopardy of not being printed, all important art must be on the inside of the outline. If there is any text that is in the design it will need to be outlined, if it is not when the art team opens the file the font will be missing and they will not be able to move forward. When creating the design please note which section you are designing on. Collars can either be a solid color or a pattern, no placed art and all seams will not line up 100%. Art is to size: If a logo is placed we will assume the size of the logo is what is shown unless size specs are specified. Art varies by size: production will make sure that when sizing up or down the spec will be edited. If there is a PMS color provided there will be a color matching process. If no PMS color is provided we will match as close as possible but there will be not a color matching process. Any and all designs must be confirmed with the art team before moving into production.
